

## RESTAURANT MANAGEMENT SYSTEM

1. Masuk ke folder htdocs, lalu dibagian atas klik dan hapus, ketik cmd lalu enter

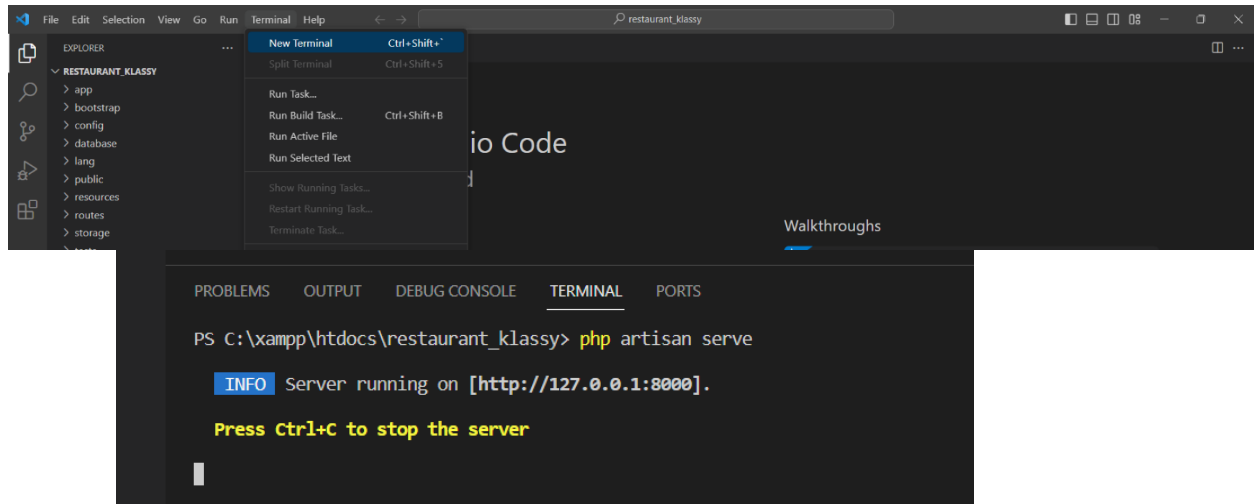

2. Setelah di enter maka akan muncul cmd seperti pada gambar

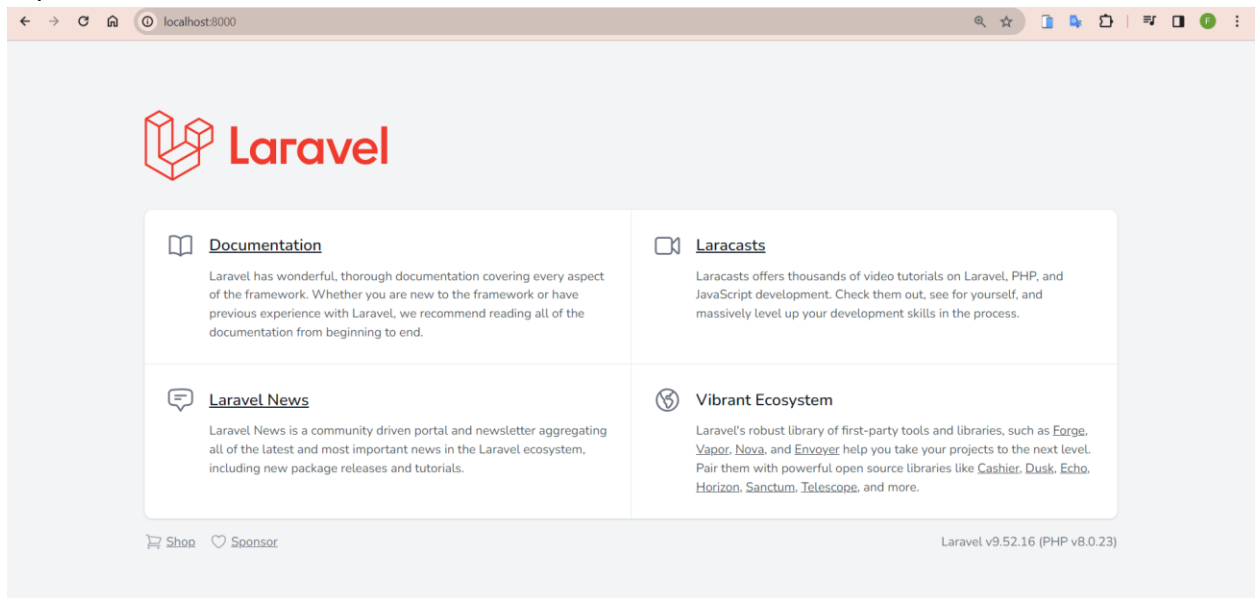

3. Lalu install Laravel seperti di bawah ini

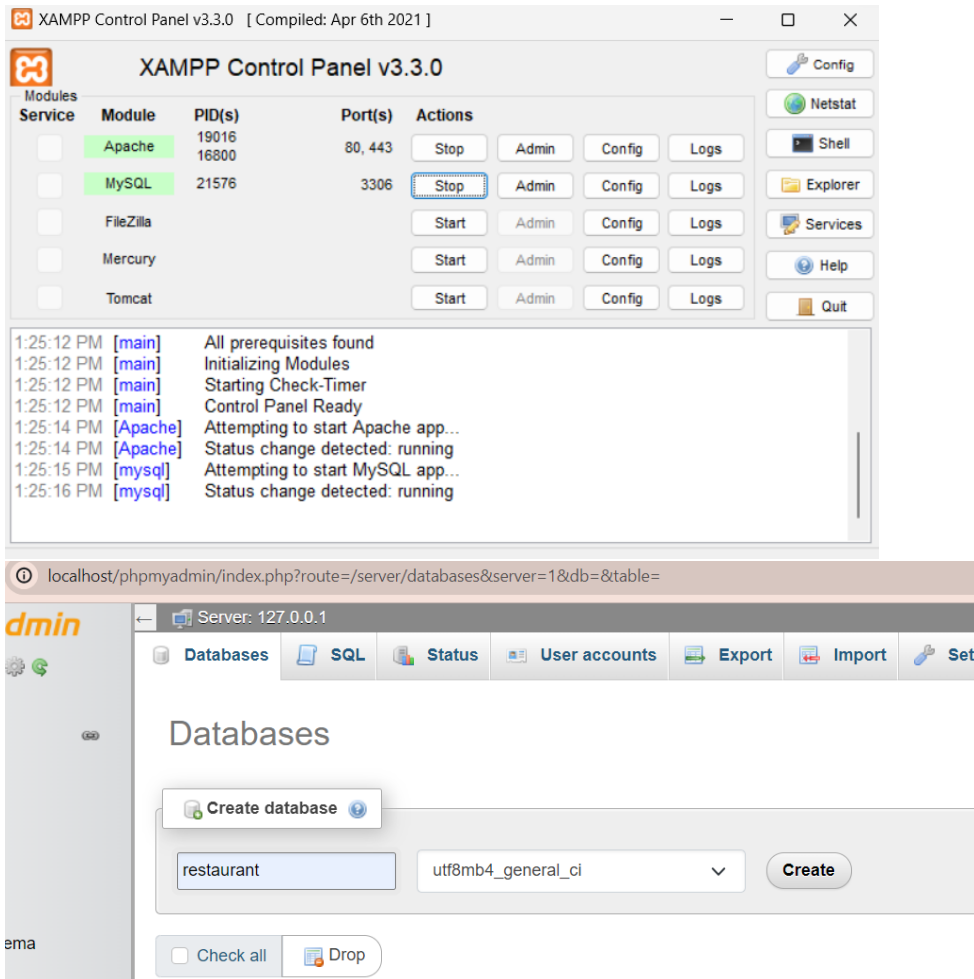

4. Jika sudah selesai install Laravel, maka buka folder tersebut di visual studio code, dan aktifkan servernya dengan cara. Klik terminal → new terminal → ketik php artisan serve

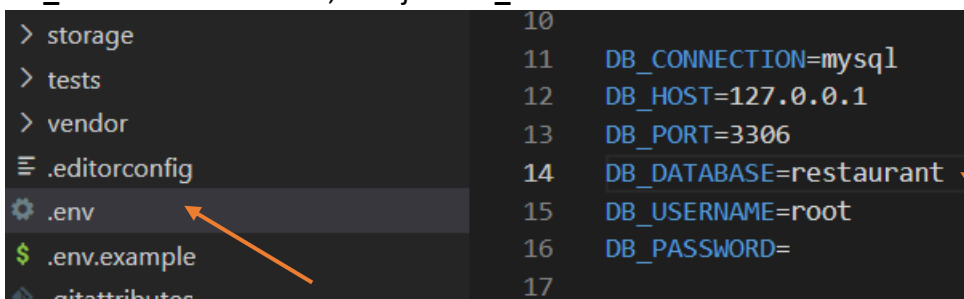

5. Setelah server menyala, maka kita ketik di browser **localhost:8000** , maka akan muncul seperti di bawah ini

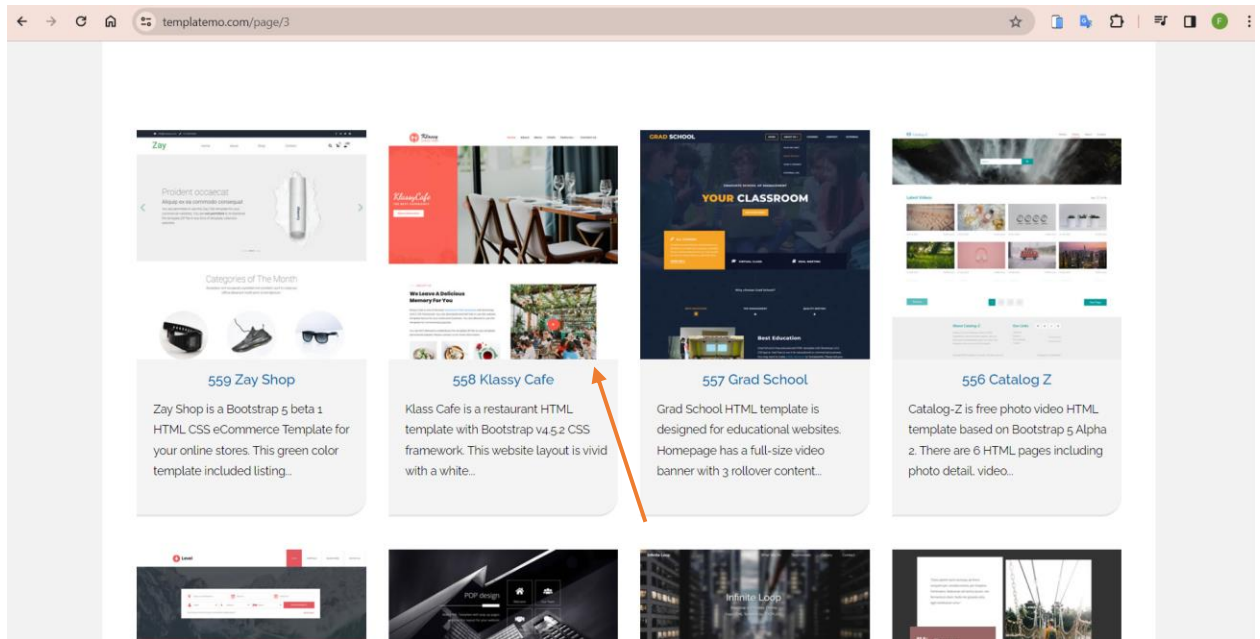

6. Setelah itu, kita nyalakan **apache** dan **mysql** pada **xampp**. Setelah menyala, kita langsung buka **phpMyAdmin** untuk membuat database nya.

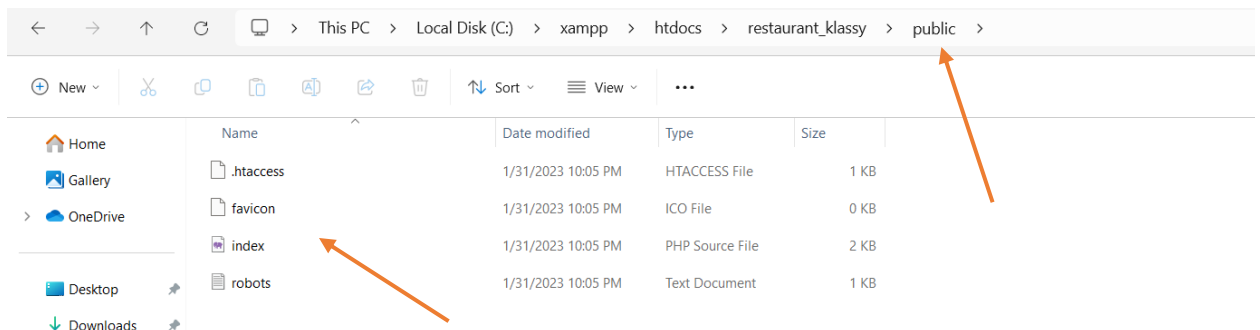

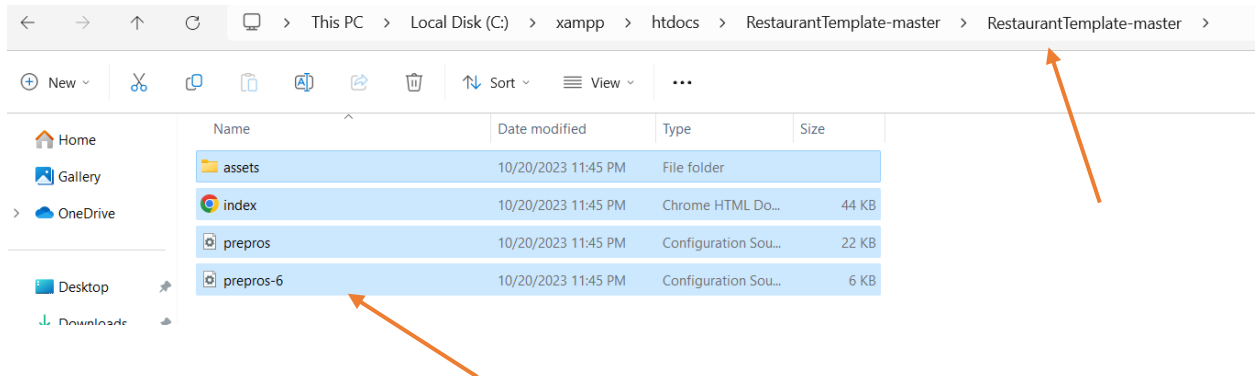

- Setelah selesai, kita buka kembali visual studio code dan buka pada file **.env** kita ganti **DB\_DATABASE = Laravel**, menjadi **DB\_DATABASE = restaurant**

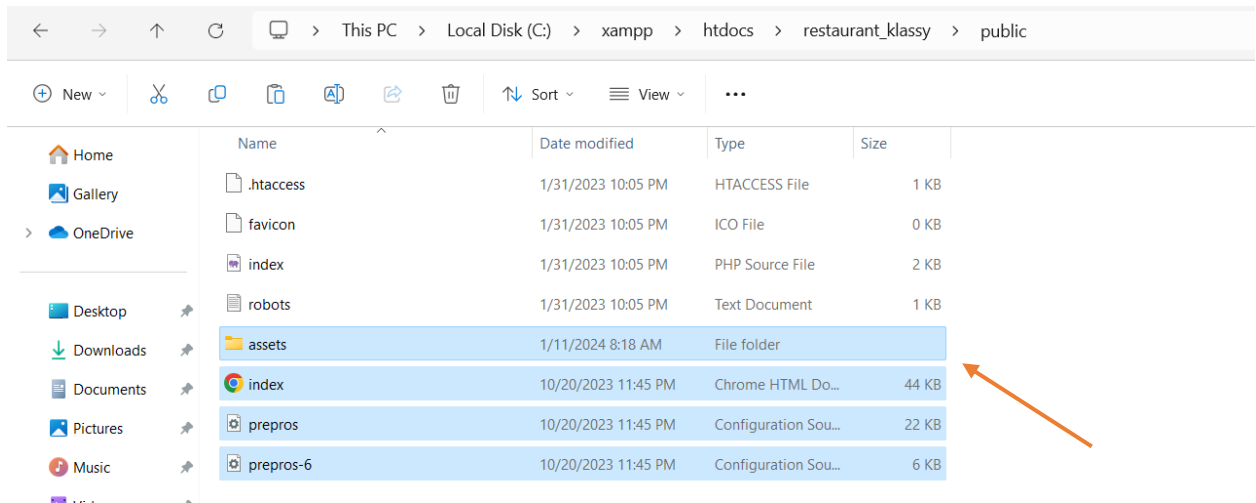

- Setelah selesai maka download template di <https://templatemo.com/> untuk import HTML Template ke laravel

- Setelah berhasil download, maka buka folder tersebut dan copy semua item yg ada di dalam folder tersebut, lalu masuk folder proyek yang sudah di buat → folder public → paste semua item di dalam folder public

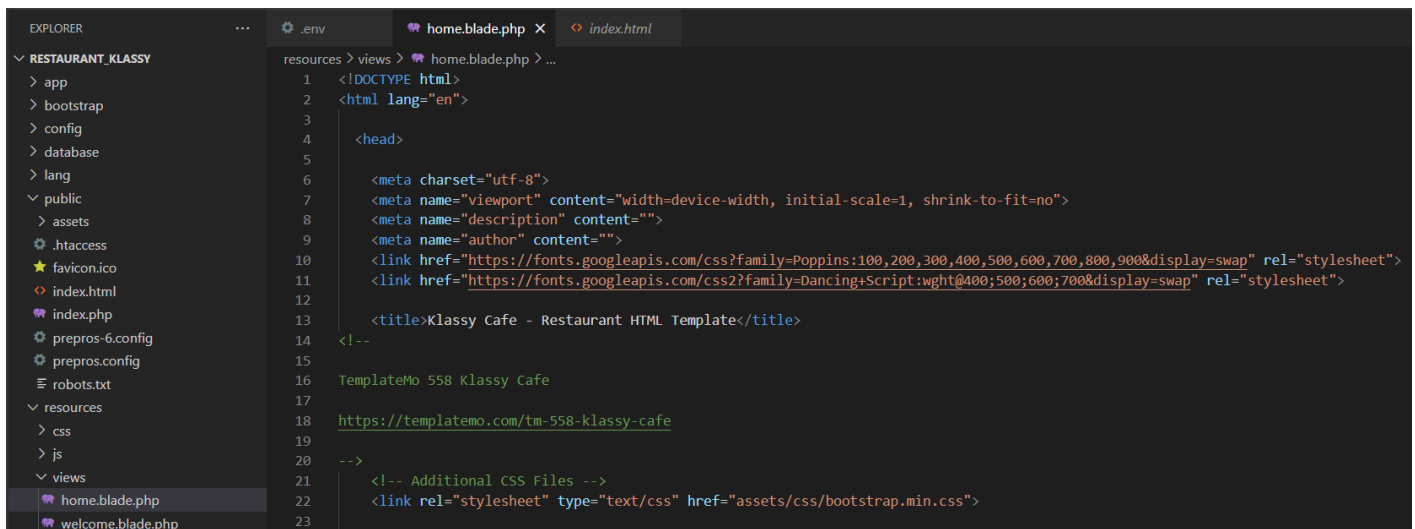

10. Selanjutnya buka folder **resource** → **views** lalu buat *file* baru, beri nama [home.blade.php](#)

11. Setelah selesai kembali ke projek kita di **Visual Studio Code**, lalu buka *folder public*, dan buka *folder index.html* lalu *copy* isi di dalamnya, dan paste di *file* [home.blade.php](#)

12. Setelah itu kita buat *controller* untuk halaman *home* yang sudah di buat dengan cara, masuk ke terminal lalu kita tulis perintah **php artisan make:controller HomeController**, jika sudah selesai maka kita buka *folder* app→Http→Controllers, maka akan muncul seperti di bawah.

```
PS C:\xampp\htdocs\restaurant_klassy> php artisan make:controller HomeController
INFO Controller [C:\xampp\htdocs\restaurant_klassy\app\Http\Controllers/HomeController.php] created successfully.
```

```
1 <?php
2
3 namespace App\Http\Controllers;
4
5 use Illuminate\Http\Request;
6
7 class HomeController extends Controller
8 {
9     //
10 }
```

13. Lalu kita masuk ke *folder* routes→web.php dan masukan *script* seperti di bawah ini.

```
use App\Http\Controllers\HomeController; ←
use Illuminate\Support\Facades\Route;

/*
|-----
| Web Routes
|-----
|
| Here is where you can register web routes for your application. These
| routes are loaded by the RouteServiceProvider within a group which
| contains the "web" middleware group. Now create something great!
|
*/

Route::get('/', function () {
    return view('welcome');
});

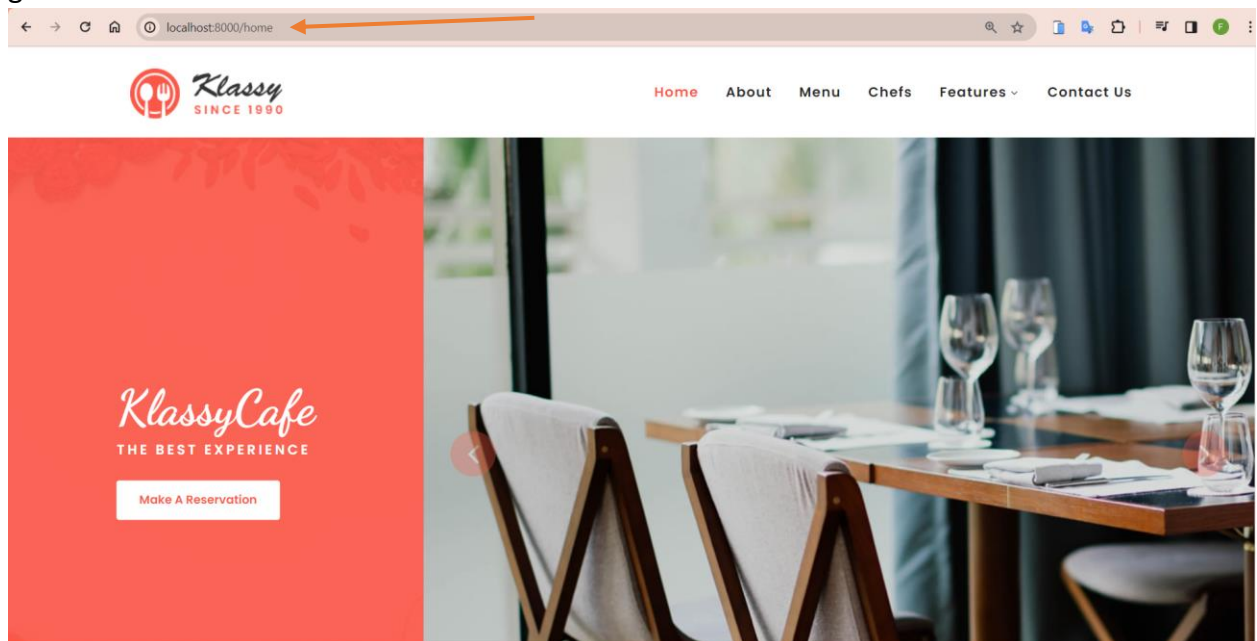

Route::get("/home", [HomeController::class, "index"]); ←
```

14. Kita buat *function* *index* pada *file* **HomeController.php** yang sudah dibuat. Tuliskan *script* seperti di bawah ini

```
✓ RESTAURANT_KLASSY
  ✓ app
    > Console
    > Exceptions
    ✓ Http
      ✓ Controllers
        Controller.php
        HomeController.php
      > Middleware
      Kernel.php
    > Models
    > Providers

app > Http > Controllers > HomeController.php > ...
1  <?php
2
3  namespace App\Http\Controllers;
4
5  use Illuminate\Http\Request;
6
7  class HomeController extends Controller
8  {
9      public function index()
10     {
11         return view("home");
12     }
13 }
```

15. Setelah selesai kita lihat pada browser, jika benar maka tampilan akan seperti pada gambar.

16. Sekarang kita akan membuat *system* **User Login dan Register**. Pertama kita buka terminal lalu masukan perintah di bawah ini satu persatu sampai selesai

1. `composer require laravel/jetstream`
2. `php artisan jetstream:install livewire`
3. `npm install`
4. `npm run dev`
5. `php artisan migrate`

```

PS C:\xampp\htdocs\restaurant_klassy> composer require laravel/jetstream
Cannot use laravel/jetstream's latest version v4.2.1 as it requires php ^8.1.0 which is not satisfied by your platform.
Using version ^3.0 for laravel/jetstream
./composer.json has been updated

PS C:\xampp\htdocs\restaurant_klassy> npm run dev

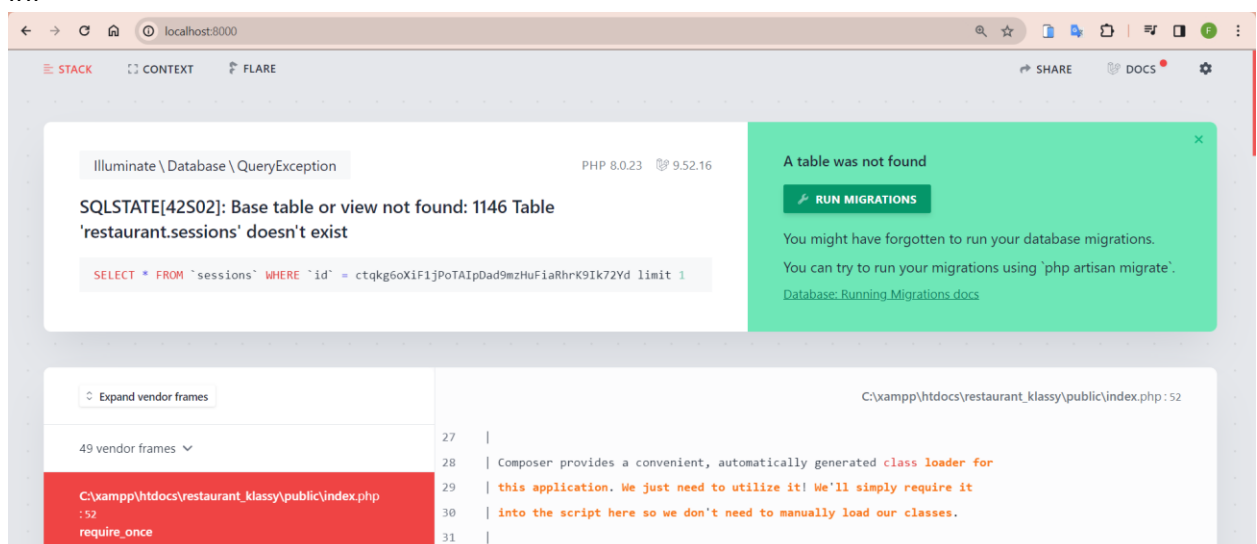

> dev
> vite

VITE v4.5.1 ready in 448 ms

→ Local:   http://localhost:5173/
→ Network: use --host to expose
→ press h to show help

```

17. Jika kita buka browser dan cek localhost:8000 maka akan ada tampilan seperti di bawah ini

18. Maka kita harus migrasikan database dan tablenya. Lanjut kita buka folder database→migrations→file angka\_create\_user\_table.php , lalu tambahkan 1 fields seperti di bawah ini

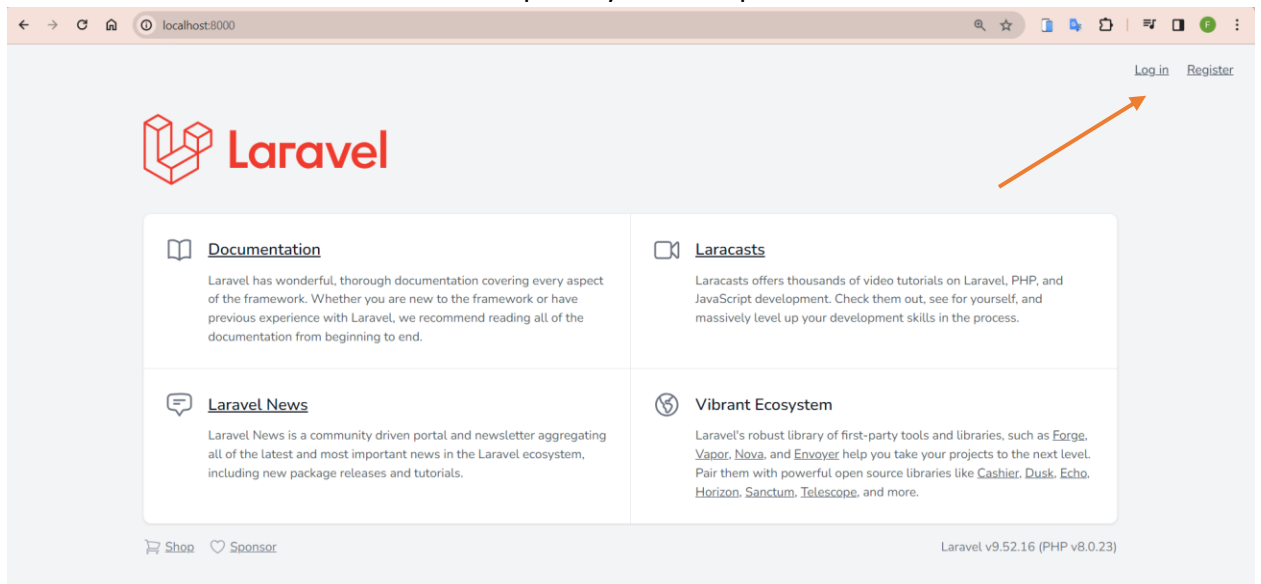

```
3 use Illuminate\Database\Migrations\Migration;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Support\Facades\Schema;
6
7 return new class extends Migration
8 {
9     /**
10      * Run the migrations.
11      */
12     public function up(): void
13     {
14         Schema::create('users', function (Blueprint $table) {
15             $table->id();
16             $table->string('name');
17             $table->string('email')->unique();
18             $table->string('usertype')->default(0);
19             $table->timestamp('email_verified_at')->nullable();
20
21             <?php
22             public function timestamps($precision = 0)
23             {
24                 Add nullable creation and update timestamps to the table.
25             }
26         });
27     }
28 }
```

19. Setelah selesai langsung simpan dan masuk ke terminal, tuliskan **php artisan migrate**

```
PS C:\xampp\htdocs\restaurant_klassy> php artisan migrate
INFO: Preparing database.
Creating migration table ..... 44ms DONE
INFO: Running migrations.
2014_10_12_000000 create users table ..... 46ms DONE
2014_10_12_100000 create password resets table ..... 82ms DONE
2014_10_12_200000 add two factor columns to users table ..... 15ms DONE
2019_08_19_000000 create failed jobs table ..... 133ms DONE
```

20. Maka cek kembali di browser maka tampilannya akan seperti di bawah ini

21. Sekarang kita akan memindahkan tombol Login dan Register ke halaman home yang sudah di buat yaitu dengan cara, masuk ke folder resource→views→welcome.blade.php lalu copy pada bagian yang ada di gambar

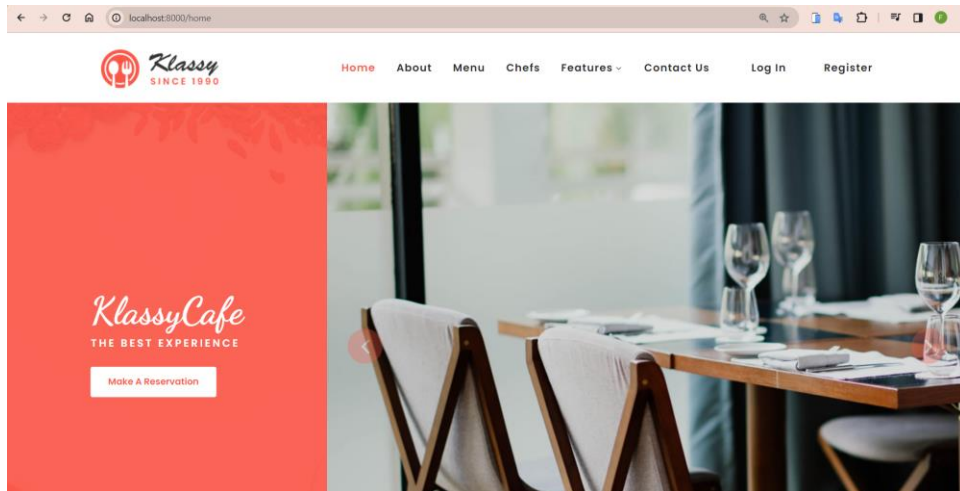

```
16 <style>
17     body {
18         font-family: 'Nunito', sans-serif;
19     }
20 </style>
21 </head>
22 <body class="antialiased">
23     <div class="relative flex items-top justify-center min-h-screen bg-gray-100 sm:items-center py-4 sm:pt-0">
24         @if (Route::has('login'))
25             <div class="hidden fixed top-0 right-0 px-6 py-4 sm:block">
26                 @auth
27                     <a href="{{ url('/dashboard') }}" class="text-sm text-gray-700 underline">Dashboard</a>
28                 @else
29                     <a href="{{ route('login') }}" class="text-sm text-gray-700 underline">Log in</a>
30                 @if (Route::has('register'))
31                     <a href="{{ route('register') }}" class="ml-4 text-sm text-gray-700 underline">Register</a>
32                 @endif
33             </div>
34         @endif
35     </div>
36     <div class="max-w-6xl mx-auto sm:px-6 lg:px-8">
37         <div class="flex justify-center pt-8 sm:justify-start sm:pt-0">
38             <svg viewBox="0 0 651 192" fill="none" xmlns="http://www.w3.org/2000/svg" class="h-16 w-auto text-gray-700 sm:h-20">
39                 <g clip-path="url(#clip0)" fill="#EF3B2D">
```

22. Paste pada file [home.blade.php](#) setelah tombol contact, dan tambahkan script seperti pada gambar, tambahkan <li> dan </li> yang sudah ditandai panah

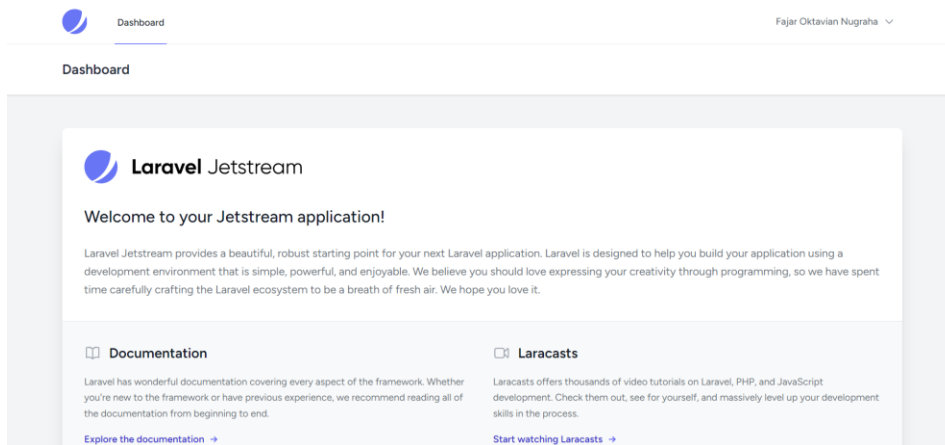

```
<li>
    @if (Route::has('login'))
        <div class="hidden fixed top-0 right-0 px-6 py-4 sm:block">
            @auth
                <li><a href="{{ url('/dashboard') }}" class="text-sm text-gray-700 underline">Dashboard</a></li>
            @else
                <li><a href="{{ route('login') }}" class="text-sm text-gray-700 underline">Log in</a></li>
                @if (Route::has('register'))
                    <li> <a href="{{ route('register') }}" class="ml-4 text-sm text-gray-700 underline">Register</a></li>
                @endif
            @endauth
        </div>
    @endif
</li>
```

23. Setelah kita cek maka keluar hasil seperti di bawah ini

24. Sekarang kita coba untuk buat akun menggunakan register, maka tampilannya akan seperti pada gambar.

25. Setelah berhasil masuk, sekarang kita akan menghapus hampir semua bagian di dalamnya, dan menyisakan *navbar* pada *dashboard* nya saja. Masuk ke folder resource→views→dashboard.blade.php.

```
resources > views > dashboard.blade.php > x-app-layout > div.py-12
1 <x-app-layout>
2   <x-slot name="header">
3     <h2 class="font-semibold text-xl text-gray-800 leading-tight">
4       {{ __('Dashboard') }}
5     </h2>
6   </x-slot>
7
8   <div class="py-12">
9     <div class="max-w-7xl mx-auto sm:px-6 lg:px-8">
resources > views > dashboard.blade.php > x-app-layout > div.py-12
1 <x-app-layout>
2
3 </x-app-layout>
4
```

26. Jika sudah maka ketika kita cek browser akan berubah jadi seperti pada gambar

27. Sekarang kita akan hubungkan Login dan Register agar ketika user berhasil Login maka langsung masuk ke halaman Home. Buka folder app→Providers→RouteServiceProvider.php

Ubah bagian di bawah ini

```
public const HOME = '/dashboard';
```

Menjadi

```
public const HOME = '/home';
```

28. Setelah selesai, kita akan memasukkan tombol Logout dan profile nya dengan cara buka file dashboard.blade.php lalu copy semuanya dan paste pada halaman [home.blade.php](#) seperti pada gambar

```
<li>
    @if (Route::has('login'))
        <div class="hidden fixed top-0 right-0 px-6 py-4 sm:block">
            @auth
                <li><a href="{{ url('/dashboard') }}" class="text-sm text-gray-700 underline">Dashboard</a></li>
            @else
                <li><a href="{{ route('login') }}" class="text-sm text-gray-700 underline">Log in</a></li>

                @if (Route::has('register'))
                    <li> <a href="{{ route('register') }}" class="ml-4 text-sm text-gray-700 underline">Register</a></li>
                @endif
            @endauth
        </div>
    @endif
</li>
```

Menjadi

```

</li>
  @if (Route::has('login'))
    <div class="hidden fixed top-0 right-0 px-6 py-4 sm:block">
      @auth
        <li>
          <x-app-layout>
            </x-app-layout>
          </li>
        @else
          <li><a href="{{ route('login') }}" class="text-sm text-gray-700 underline">Log in</a></li>

          @if (Route::has('register'))
            <li> <a href="{{ route('register') }}" class="ml-4 text-sm text-gray-700 underline">Register</a></li>
          @endif
        @endauth
      </div>
    @endif
  </li>

```

29. Selanjutnya kita buka folder resource→views→layouts→app.blade.php , kita ubah seperti pada gambar

```

<div class="min-h-screen bg-gray-100">
  @livewire('navigation-menu')

```

menjadi

```

<div class="">
  @livewire('navigation-menu')

```

30. Untuk menghilangkan menu *dashboard* dan logo nya, kita buka folder resource→views→navigation-menu.blade.php , kita hapus seperti pada gambar.

```

<!-- Logo -->
<div class="shrink-0 flex items-center">
  <a href="{{ route('dashboard') }}">
    <x-application-mark class="block h-9 w-auto" />
  </a>
</div>

<!-- Navigation Links -->
<div class="hidden space-x-8 sm:-my-px sm:ml-10 sm:flex">
  <x-nav-link href="{{ route('dashboard') }}" :active="request()->routeIs('dashboard')">
    {{ __('Dashboard') }}
  </x-nav-link>
</div>

```

Dihapus semua

31. Berikutnya kita membuat rute ketika logout langsung menuju halaman [home.blade.php](#) , kita buka routes→web.php , lalu hapus beberapa bagian seperti pada gambar

```

Route::get('/', function () {
    return view('welcome');
});

Route::get("/home", [HomeController::class, "index"]);

```

Menjadi

```

Route::get("/", [HomeController::class, "index"]);

```

32. Selesai, sekarang bisa kita coba fungsi dari system Login dan Register yang sudah dibuat
33. Sekarang kita membuat system Login untuk admin. Langkah berikutnya kita buat akun untuk admin, seperti pada gambar

A registration form with a blue circular logo at the top. The form contains four input fields: 'Name' with the value 'admin', 'Email' with the value 'admin@gmail.com', 'Password' with masked characters '.....', and 'Confirm Password' with masked characters '.....'. Below the fields are two links: 'Already registered?' and a 'REGISTER' button.

34. Lalu kita buka folder app→providers→RouteServiceProvider.php ubah script pada dibawah ini

```
public const HOME = '/';
```

menjadi

```
public const HOME = '/redirects';
```

35. Lalu buka file web.php, tambahkan script di bawah ini untuk mengarahkan URI nya

```
Route::get("/redirects", [HomeController::class, "redirects"]);
```

36. Setelah itu, kita buat function redirects pada file HomeController.php seperti di bawah ini

```
public function redirects()
{
    $usertype= Auth::user()->usertype;

    if($usertype=='1')
    {
        return view();
    }
    else
    {
        return view("home");
    }
}
```

37. Langkah selanjut membuat folder baru di dalam folder views beri nama admin, dan tambahkan file baru bernama adminhome.blade.php

38. Lalu kita masuk ke **HomeController.php** , pada function redirects kita tambahkan script dibawah ini agar ketika admin login, maka akan langsung mengarahkan ke halaman adminhome

```
public function redirects()
{
    $usertype= Auth::user()->usertype;

    if($usertype=='1')
    {
        return view("admin.adminhome");
    }
    else
    {
        return view("home");
    }
}
```

39. Masukan script di bawah ini untuk pada halamn adminhome.blade.php

```
resources > views > admin > adminhome.blade.php > ...
1 <x-app-layout>
2
3 </x-app-layout>
4
```

40. Untuk mencari tahu apakah halaman adminhome berhasil, kita bisa masuk ke database yang sudah dibuat di phpMyAdmin. Ubah usertype admin yang awalnya 0 menjadi 1

	id	name	email	usertype	email_verified_at	password	two_fac
<input type="checkbox"/>	1	Fajar Oktavian Nugraha	fajaroktavian58@gmail.com	0	NULL	\$2y\$10\$h.7vVv6vVDpUvZCRnXlqcOETmpR3r2ly7Fgl6xIPKXl...	NULL
<input type="checkbox"/>	2	admin	admin@gmail.com	0	NULL	\$2y\$10\$wdv0pU84y9bQ5rQegRe8seWa3z3HzRE5L2fpgv4Q1dh...	NULL

### Menjadi

	id	name	email	usertype	email_verified_at	password	two_fac
<input type="checkbox"/>	1	Fajar Oktavian Nugraha	fajaroktavian58@gmail.com	0	NULL	\$2y\$10\$h.7vVv6vVDpUvZCRnXlqcOETmpR3r2ly7Fgl6xIPKXl...	NULL
<input type="checkbox"/>	2	admin	admin@gmail.com	1	NULL	\$2y\$10\$wdv0pU84y9bQ5rQegRe8seWa3z3HzRE5L2fpgv4Q1dh...	NULL

41. Kita coba Login menggunakan akun admin, maka tampilannya akan seperti di bawah ini

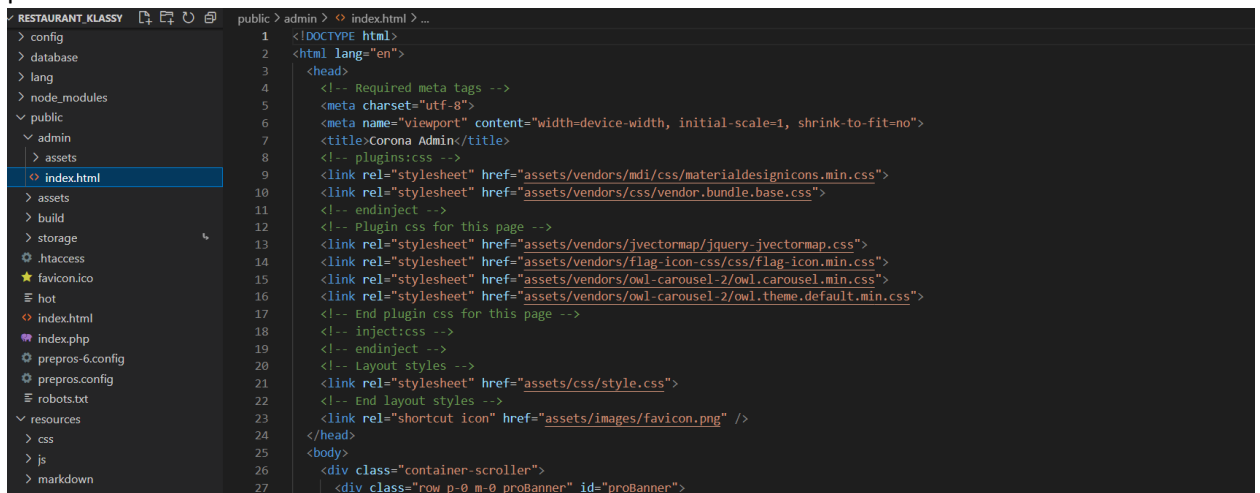

42. Sekarang kita akan membuat halaman dashboard admin. Cari terlebih dahulu templet admin di <https://www.bootstrapdash.com/blog/free-simple-admin-panel-templates> , setelah selesai download.

43. Jika sudah selesai, buka folder template admin yang sudah di download lalu masuk ke template → copy folder asset dan file index → buka folder public projek kalian → buat folder baru bernama admin → paste folder asset dan file index di dalamnya

44. Setelah selesai, kita buka kembali visual studio code, lalu buka file index.html yang tadi sudah di pindahkan ke folder admin

45. Copy isi templatennya dan paste pada file adminhome.blade.php

```

resources > views > admin > adminhome.blade.php > x-app-layout
1 <x-app-layout>
2 |
3 </x-app-layout>
4

RESTAURANT_KLASSY resources > views > admin > adminhome.blade.php > x-app-layout > html > head
1 <x-app-layout>
2 <!DOCTYPE html>
3 <html lang="en">
4 <head>
5 <!-- Required meta tags -->
6 <meta charset="utf-8">
7 <meta name="viewport" content="width=device-width, initial-scale=1, shrink-to-fit=no">
8 <title>Corona Admin</title>
9 <!-- plugins:css -->
10 <link rel="stylesheet" href="assets/vendors/mdi/css/materialdesignicons.min.css">
11 <link rel="stylesheet" href="assets/vendors/css/vendor.bundle.base.css">
12 <!-- endinject -->
13 <!-- Plugin css for this page -->
14 <link rel="stylesheet" href="assets/vendors/jvectormap/jquery-jvectormap.css">
15 <link rel="stylesheet" href="assets/vendors/flag-icon-css/css/flag-icon.min.css">
16 <link rel="stylesheet" href="assets/vendors/owl-carousel-2/owl.carousel.min.css">
17 <link rel="stylesheet" href="assets/vendors/owl-carousel-2/owl.theme.default.min.css">
18 <!-- End plugin css for this page -->
19 <!-- inject:css -->
20 <!-- endinject -->

```

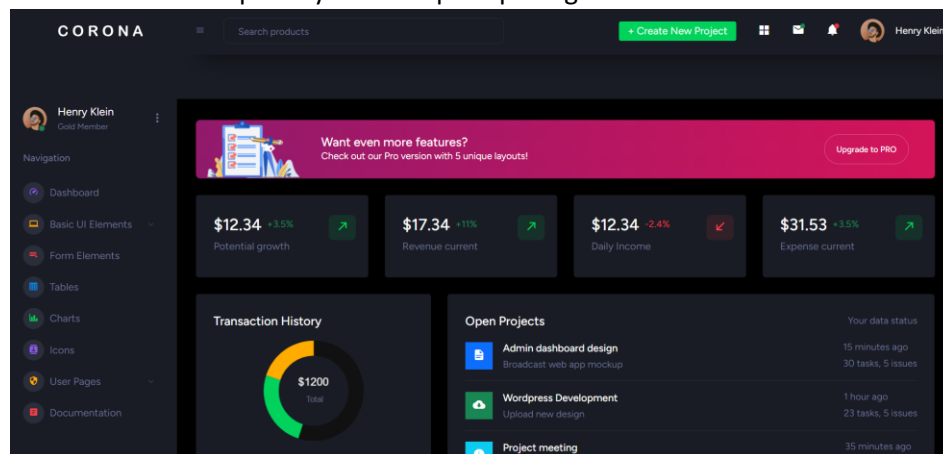

46. Tambahkan **admin/** pada bagian yang di tandai/lokasi yang ingin dituju, agar template dapat terbaca

```

<link rel="stylesheet" href="admin/assets/vendors/mdi/css/materialdesignicons.min.css">
<link rel="stylesheet" href="admin/assets/vendors/css/vendor.bundle.base.css">
<!-- endinject -->
<!-- Plugin css for this page -->
<link rel="stylesheet" href="admin/assets/vendors/jvectormap/jquery-jvectormap.css">
<link rel="stylesheet" href="admin/assets/vendors/flag-icon-css/css/flag-icon.min.css">
<link rel="stylesheet" href="admin/assets/vendors/owl-carousel-2/owl.carousel.min.css">
<link rel="stylesheet" href="admin/assets/vendors/owl-carousel-2/owl.theme.default.min.css">

```

47. Jika sudah selesai maka tampilannya akan seperti pada gambar

48. Sekarang kita ubah bagian tampilan halaman adminnya dengan cara menghapus beberapa bagiannya, hapus bagian seperti di gambar

```
<!-- partial -->
<div class="container-fluid page-body-wrapper">
<!-- partial:partials/_navbar.html -->
<nav class="navbar p-0 fixed-top d-flex flex-row">
<div class="navbar-brand-wrapper d-flex d-lg-none align-items-center justify-content-center">
<a class="navbar-brand brand-logo-mini" href="index.html"></a>
</div>
<div class="navbar-menu-wrapper flex-grow d-flex align-items-stretch">
<button class="navbar-toggler navbar-toggler align-self-center" type="button" data-toggle="minimize">
<span class="mdi mdi-menu"></span>
</button>
<ul class="navbar-nav w-100">
<li class="nav-item w-100">
<form class="nav-link mt-2 mt-md-0 d-none d-lg-flex search">
<input type="text" class="form-control" placeholder="Search products">
</form>
</li>
</ul>
<ul class="navbar-nav navbar-nav-right">
<li class="nav-item dropdown d-none d-lg-block">
<a class="nav-link btn btn-success create-new-button" id="createbuttonDropdown" data-bs-toggle="dropdown" aria-expanded="false">
<div class="dropdown-menu dropdown-menu-right navbar-dropdown preview-list" aria-labelledby="createbuttonDropdown">
```

Sampai kebagian bawah, seperti pada gambar

```
resources > views > admin > adminhome.blade.php > x-app-layout > html > body > div.container-scroller > div.container-fluid.page-body-wrapper > div.main-panel >
1031 <td>Brasil</td>
1032 <td class="text-right"> 230 </td>
1033 <td class="text-right font-weight-medium"> 75.00% </td>
1034 </tr>
1035 </tbody>
1036 </table>
1037 </div>
1038 </div>
1039 <div class="col-md-7">
1040 <div id="audience-map" class="vector-map"></div>
1041 </div>
1042 </div>
1043 </div>
1044 </div>
1045 </div>
1046 </div>
1047 </div>
1048 <!-- content-wrapper ends -->
1049 <!-- partial:partials/_footer.html -->
1050 <footer class="footer">
1051 <div class="d-sm-flex justify-content-center justify-content-sm-between">
1052 <span class="text-muted d-block text-center text-sm-left d-sm-inline-block">Copyright © bootstrapdash.com 2021</span>
1053 <span class="float-none float-sm-right d-block mt-1 mt-sm-0 text-center">Free <a href="https://www.bootstrapdash.com/b">
1054 </span>
1055 </div>
1056 </div>
```

49. Sekarang kita hapus juga untuk bagian seperti di bawah ini

```
<li class="nav-item profile">
<div class="profile-desc">
<div class="profile-pic">
<div class="count-indicator">

<span class="count bg-success"></span>
</div>
<div class="profile-name">
<h5 class="mb-0 font-weight-normal">Henry Klein</h5>
<span>Gold Member</span>
</div>
</div>
<a href="#" id="profile-dropdown" data-bs-toggle="dropdown"><i class="mdi mdi-dots-vertical"></i></a>
<div class="dropdown-menu dropdown-menu-right sidebar-dropdown preview-list" aria-labelledby="profile-dropdown">
<a href="#" class="dropdown-item preview-item">
<div class="preview-thumbnail">
<div class="preview-icon bg-dark rounded-circle">
<i class="mdi mdi-settings text-primary"></i>
</div>
```

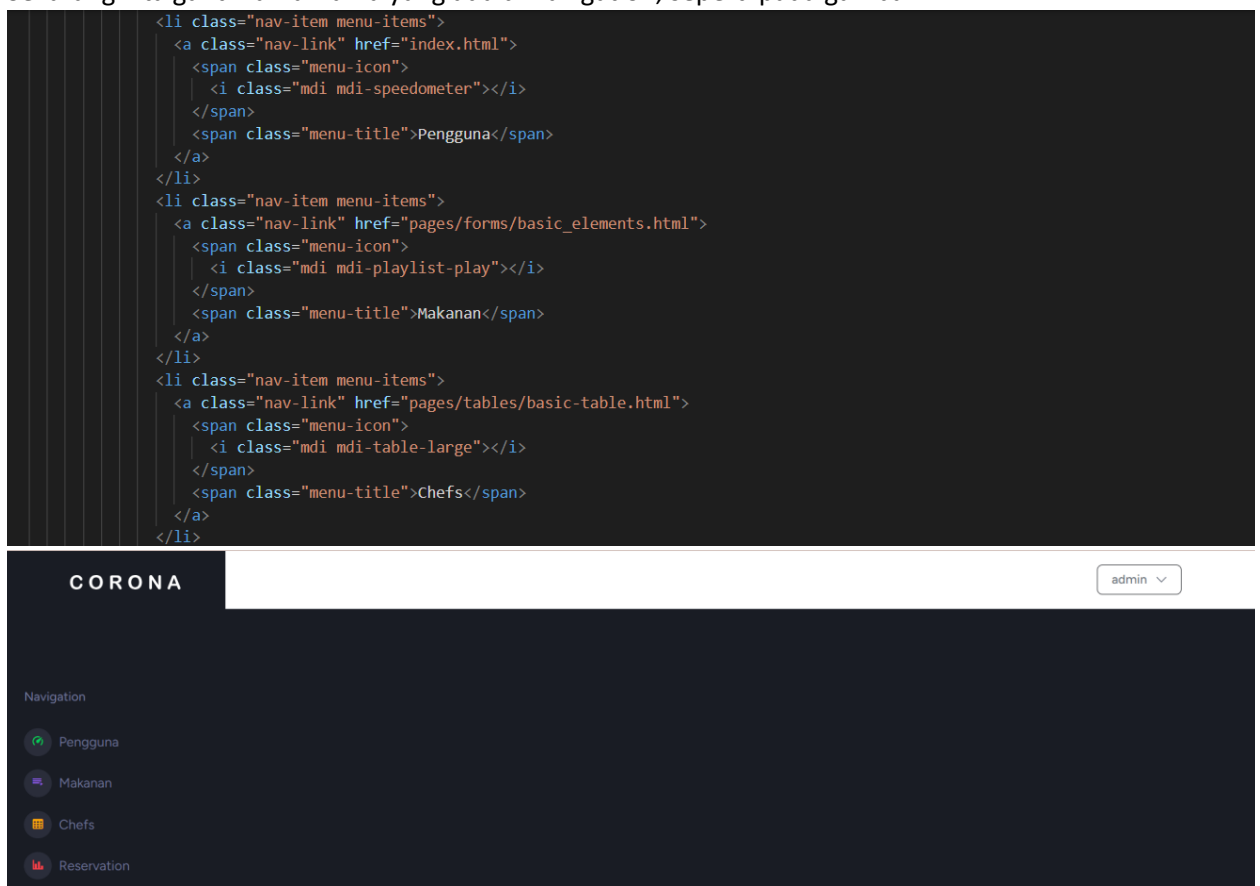

Sampai

```

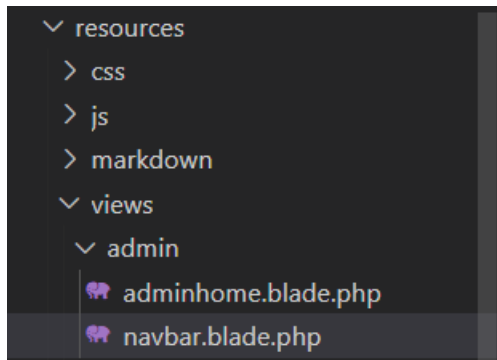

resources > views > admin > adminhome.blade.php > x-app-layout > html > body > div.container-scroller > nav#sidebar.sidebar.sidebar-offcanvas >
77 .....<div class="dropdown-divider"></div>
78 .....<a href="#" class="dropdown-item preview-item">
79 .....<div class="preview-thumbnail">
80 .....<div class="preview-icon bg-dark rounded-circle">
81 .....<i class="mdi mdi-onepassword text-info"></i>
82 .....</div>
83 .....</div>
84 .....<div class="preview-item-content">
85 .....<p class="preview-subject ellipsis mb-1 text-small">Change Password</p>
86 .....</div>
87 .....</a>
88 .....<div class="dropdown-divider"></div>
89 .....<a href="#" class="dropdown-item preview-item">
90 .....<div class="preview-thumbnail">
91 .....<div class="preview-icon bg-dark rounded-circle">
92 .....<i class="mdi mdi-calendar-today text-success"></i>
93 .....</div>
94 .....</div>
95 .....<div class="preview-item-content">
96 .....<p class="preview-subject ellipsis mb-1 text-small">To-do list</p>
97 .....</div>
98 .....</a>
99 .....</div>
100 .....</li>
101 .....</li>
102 .....<li class="nav-item nav-category">
103 .....<span class="nav-link">Navigation</span>
104 .....</li>

```

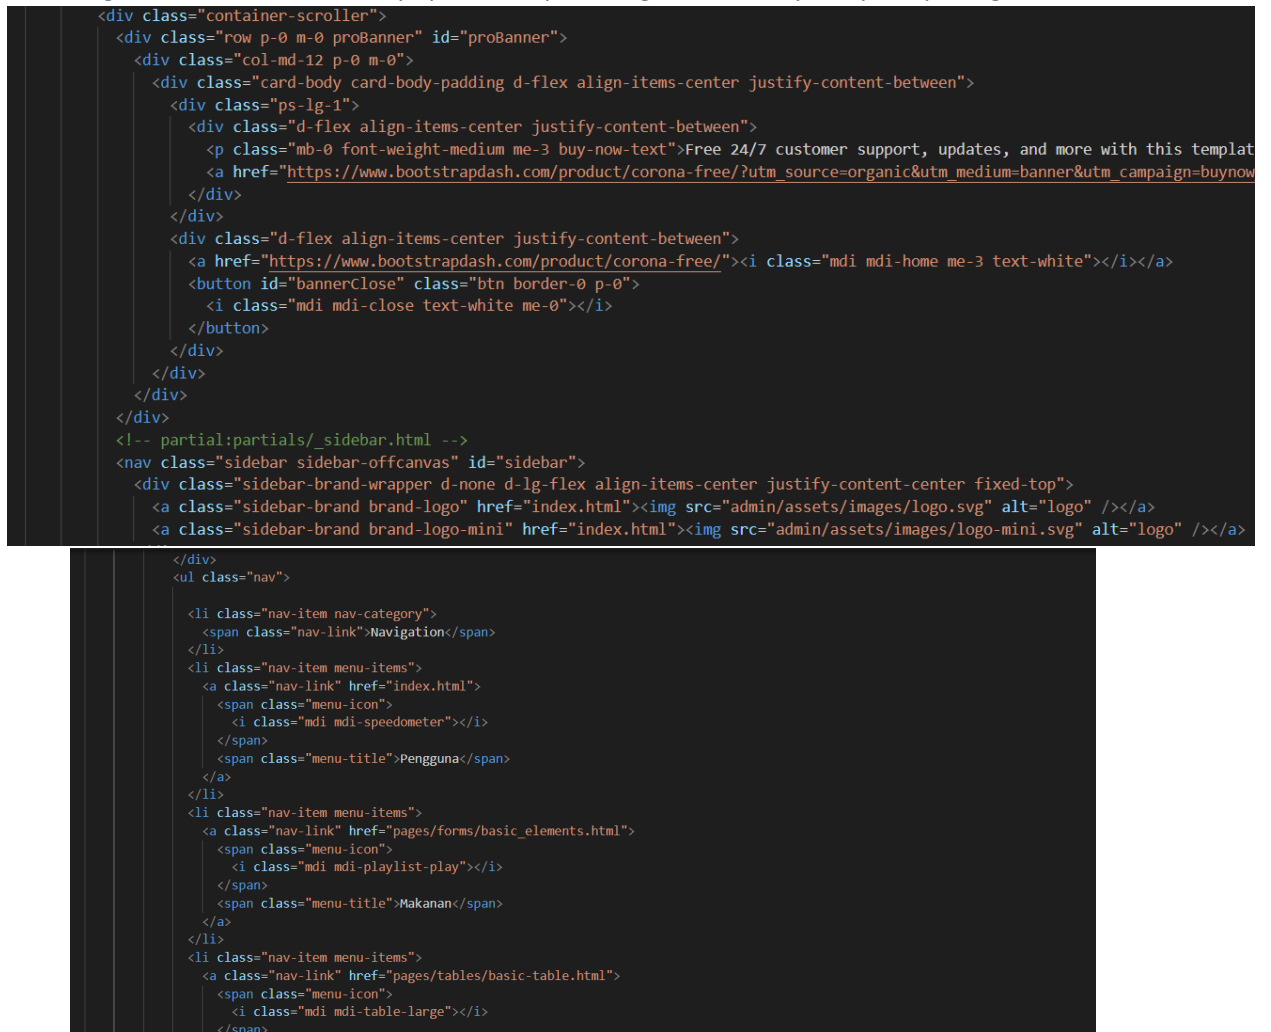

50. Sekarang kita ganti nama-nama yang ada di navigation, seperti pada gambar

51. Buka folder resources→views→admin→buat file baru, beri nama navbar.blade.php

52. Sekarang kita adminhome.blade.php lalu cut pada bagian navbarnya, seperti pada gambar

```

        <span class="menu-title">Chefs</span>
      </a>
    </li>
    <li class="nav-item menu-items">
      <a class="nav-link" href="pages/charts/chartjs.html">
        <span class="menu-icon">
          <i class="mdi mdi-chart-bar"></i>
        </span>
        <span class="menu-title">Reservation</span>
      </a>
    </li>
  </ul>
</nav>
<!-- partial -->
| <!-- partial -->
</div>
<!-- main-panel ends -->
</div>
<!-- page-body-wrapper ends -->
</div>

```

53. Lalu paste pada file navbar.blade.php

```

1 <div class="container-scroller">
2   <div class="row p-0 m-0 proBanner" id="proBanner">
3     <div class="col-md-12 p-0 m-0">
4       <div class="card-body card-body-padding d-flex align-items-center justify-content-between">
5         <div class="ps-lg-1">
6           <div class="d-flex align-items-center justify-content-between">
7             <p class="mb-0 font-weight-medium me-3 buy-now-text">Free 24/7 customer support, updates, and more with this template!</p>
8             <a href="https://www.bootstrapdash.com/product/corona-free/?utm_source=organic&utm_medium=banner&utm_campaign=buynow_demo" t.
9           </div>
10          </div>
11          <div class="d-flex align-items-center justify-content-between">
12            <a href="https://www.bootstrapdash.com/product/corona-free/"><i class="mdi mdi-home me-3 text-white"></i></a>
13            <button id="bannerClose" class="btn border-0 p-0">
14              <i class="mdi mdi-close text-white me-0"></i>
15            </button>
16          </div>
17        </div>
18      </div>
19    </div>
20    <!-- partial:partials/_sidebar.html -->

```

54. Lalu save, maka tampilannya akan seperti pada gambar

55. Sekarang kita buka kembali adminhome.blade.php lalu tambahkan script seperti pada gambar

```

<link rel="stylesheet" href="admin/assets/css/style.css">
<!-- End layout styles -->
<link rel="shortcut icon" href="admin/assets/images/favicon.png" />
</head>
<body>

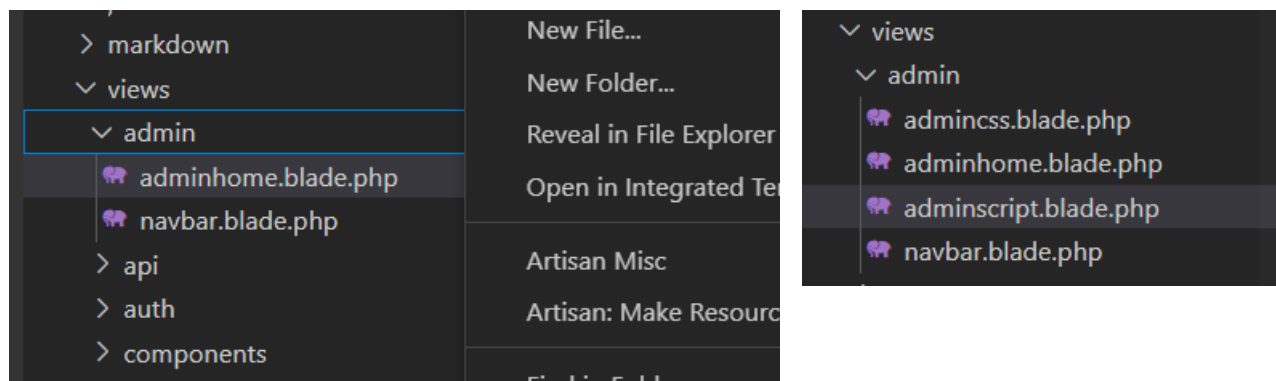

@include("admin.navbar");
<!-- container-scroller -->
<!-- plugins:js -->
<script src="admin/assets/vendors/js/vendor.bundle.base.js"></script>
<!-- endinject -->
<!-- Plugin js for this page -->
<script src="admin/assets/vendors/chart.js/Chart.min.js"></script>
<script src="admin/assets/vendors/progressbar.js/progressbar.min.js"></script>
<script src="admin/assets/vendors/jvectormap/jquery-jvectormap.min.js"></script>
<script src="admin/assets/vendors/jvectormap/jquery-jvectormap-world-mill-en.js"></script>
<script src="admin/assets/vendors/owl-carousel-2/owl.carousel.min.js"></script>
<script src="admin/assets/js/jquery.cookie.js" type="text/javascript"></script>

```

56. jika sudah maka tampilannya akan seperti gambar di bawah

57. Selanjutnya buka resources→ views→admin→tambah file baru beri nama admincss.blade.php dan adminscript.blade.php

58. Buka adminhome.blade.php lalu cut bagian css nya seperti pada gambar

```

<x-app-layout>
  <!DOCTYPE html>
  <html lang="en">
    <head>
      <!-- Required meta tags -->
      <meta charset="utf-8">
      <meta name="viewport" content="width=device-width, initial-scale=1, shrink-to-fit=no">
      <title>Corona Admin</title>
      <!-- plugins:css -->
      <link rel="stylesheet" href="admin/assets/vendors/mdi/css/materialdesignicons.min.css">
      <link rel="stylesheet" href="admin/assets/vendors/css/vendor.bundle.base.css">
      <!-- endinject -->
      <!-- Plugin css for this page -->
      <link rel="stylesheet" href="admin/assets/vendors/jvectormap/jquery-jvectormap.css">
      <link rel="stylesheet" href="admin/assets/vendors/flag-icon-css/css/flag-icon.min.css">
      <link rel="stylesheet" href="admin/assets/vendors/owl-carousel-2/owl.carousel.min.css">
      <link rel="stylesheet" href="admin/assets/vendors/owl-carousel-2/owl.theme.default.min.css">
      <!-- End plugin css for this page -->
      <!-- inject:css -->
      <!-- endinject -->
      <!-- Layout styles -->
      <link rel="stylesheet" href="admin/assets/css/style.css">
      <!-- End layout styles -->
      <link rel="shortcut icon" href="admin/assets/images/favicon.png" />

```

59. Lalu paste di admincss.blade.php

```

resources > views > admin > admincss.blade.php > ...
1  <!-- Required meta tags -->
2  <meta charset="utf-8">
3  <meta name="viewport" content="width=device-width, initial-scale=1, shrink-to-fit=no">
4  <title>Corona Admin</title>
5  <!-- plugins:css -->
6  <link rel="stylesheet" href="admin/assets/vendors/mdi/css/materialdesignicons.min.css">
7  <link rel="stylesheet" href="admin/assets/vendors/css/vendor.bundle.base.css">
8  <!-- endinject -->
9  <!-- Plugin css for this page -->
10 <link rel="stylesheet" href="admin/assets/vendors/jvectormap/jquery-jvectormap.css">
11 <link rel="stylesheet" href="admin/assets/vendors/flag-icon-css/css/flag-icon.min.css">
12 <link rel="stylesheet" href="admin/assets/vendors/owl-carousel-2/owl.carousel.min.css">
13 <link rel="stylesheet" href="admin/assets/vendors/owl-carousel-2/owl.theme.default.min.css">
14 <!-- End plugin css for this page -->
15 <!-- inject:css -->
16 <!-- endinject -->
17 <!-- Layout styles -->
18 <link rel="stylesheet" href="admin/assets/css/style.css">
19 <!-- End layout styles -->
20 <link rel="shortcut icon" href="admin/assets/images/favicon.png" />

```

60. Sekarang kita cut bagian script pada adminhome.blade.php, lalu kita paste di adminscript.blade.php

```

resources > views > admin > adminhome.blade.php > x-app-layout > html > body
11      <!-- plugins:js -->
12      <script src="admin/assets/vendors/js/vendor.bundle.base.js"></script>
13      <!-- endinject -->
14      <!-- Plugin js for this page -->
15      <script src="admin/assets/vendors/chart.js/Chart.min.js"></script>
16      <script src="admin/assets/vendors/progressbar.js/progressbar.min.js"></script>
17      <script src="admin/assets/vendors/jvectormap/jquery-jvectormap.min.js"></script>
18      <script src="admin/assets/vendors/jvectormap/jquery-jvectormap-world-mill-en.js"></script>
19      <script src="admin/assets/vendors/owl-carousel-2/owl.carousel.min.js"></script>
20      <script src="admin/assets/js/jquery.cookie.js" type="text/javascript"></script>
21      <!-- End plugin js for this page -->
22      <!-- inject:js -->
23      <script src="admin/assets/js/off-canvas.js"></script>
24      <script src="admin/assets/js/hoverable-collapse.js"></script>
25      <script src="admin/assets/js/misc.js"></script>
26      <script src="admin/assets/js/settings.js"></script>
27      <script src="admin/assets/js/todolist.js"></script>
28      <!-- endinject -->
29      <!-- Custom js for this page -->
30      <script src="admin/assets/js/dashboard.js"></script>
31      <!-- End custom js for this page -->

```

61. Setelah selesai kita panggil halaman adminscript dan admincss ke dalam adminhome dengan cara menambahkan script seperti pada gambar

```

resources > views > admin > adminhome.blade.php > x-app-layout > html > body
1      <x-app-layout>
2      <!DOCTYPE html>
3      <html lang="en">
4      <head>
5          @include("admin.admincss")
6      </head>
7      <body>
8
9          @include("admin.navbar")
10         <!-- container-scroller -->
11
12         @include("admin.adminscript")
13
14     </body>
15 </html>
16 </x-app-layout>

```

62. Langkah selanjutnya kita buka file navbar.blade.php ganti scriptdi bawah ini

```

<li class="nav-item menu-items">
  <a class="nav-link" href="index.html">
    <span class="menu-icon">
      <i class="mdi mdi-speedometer"></i>
    </span>
    <span class="menu-title">Pengguna</span>
  </a>
</li>

```

Menjadi

```

<li class="nav-item menu-items">
  <a class="nav-link" href="{{url('/users')}}">
    <span class="menu-icon">
      <i class="mdi mdi-speedometer"></i>
    </span>
    <span class="menu-title">Pengguna</span>
  </a>
</li>

```

63. Selanjutnya kita buat controller untuk admin, maka tuliskan pada terminal seperti dibawah ini

```
PS C:\xampp\htdocs\restaurant_klassy> php artisan make:controller AdminController
```

```
INFO Controller [C:\xampp\htdocs\restaurant_klassy\app\Http\Controllers\AdminController.php] created successfully.
```

64. Lalu buka file AdminController tambahkan script seperti pada gambar

```

app > Http > Controllers > AdminController.php > ...
1  <?php
2
3  namespace App\Http\Controllers;
4
5  use Illuminate\Http\Request;
6
7  class AdminController extends Controller
8  {
9      public function users()
10     {
11         return view("admin.users");
12     }
13 }

```

65. Lalu buka file web.php lalu tambahkan script di bawah ini

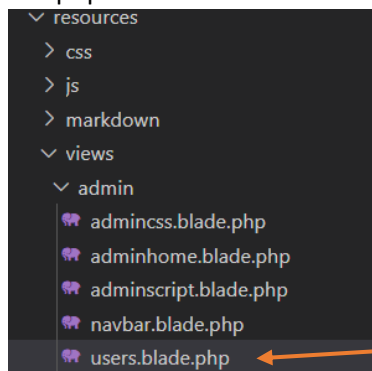

Dibagian atasnya

```
use App\Http\Controllers\AdminController;
```

dan tambahkan route

```
Route::get("/users", [AdminController::class, "users"]);
```

66. Buat file baru beri nama users.blade.php

67. Sekarang kita membuat tampilan user.blade.php dengan menuliskan script di bawah ini

```

1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <meta http-equiv="X-UA-Compatible" content="ie=edge">
7      <title>Pengguna</title>
8  </head>
9  <body>
10     <x-app-layout>
11         <!DOCTYPE html>
12         <html lang="en">
13             <head>
14                 @include("admin.admincss")
15             </head>
16             <body>
17                 <div class="container-scroller">
18
19                     @include("admin.navbar")
20                     <!-- container-scroller -->
21                     <!doctype html>
22 </html>
23 </body>
24 </html>
25 </body>
26 </html>
27 </body>
28 </html>
29 </body>
30 </html>
31 </html>
32 <!-- START DATA -->
33 <div class="my-3 p-3 bg-body rounded shadow-sm">
34     <!-- FORM PENCARIAN -->
35     <div class="pb-3">
36         <form class="d-flex" action="" method="get">
37             <input class="form-control me-1" type="search" name="katakunci" value="{{ Request::get('katakunci') }}"
38                 placeholder="Masukkan kata kunci" aria-label="Search">
39             <button class="btn btn-secondary" type="submit">Cari</button>
40         </form>
41     </div>
42
43     <!-- TOMBOL TAMBAH DATA -->
44     <div class="pb-3">
45         <a href="" class="btn btn-primary">+ Tambah Data</a>
46     </div>
47
48     <table class="table table-striped">
49         <thead>
50             <tr>
51                 <th class="col-md-1">No</th>
52                 <th class="col-md-3">>Nama</th>
53                 <th class="col-md-4">Email</th>
54                 <th class="col-md-2">Aksi</th>
55             </tr>

```

```

        </thead>
        <tbody>

        <?php $i=$data->firstItem()?>
        @foreach ( $data as $data )
        <tr>
            <td>{{$i}}</td>
            <td>{{$data->name}}</td>
            <td>{{$data->email}}</td>

            @if ($data->usertype=="0")
            <td>
                <a href='' class="btn btn-warning btn-sm">Edit</a>
                <a href='{{url('/deleteuser',$data->id)}}' class="btn btn-danger btn-sm">Del</a>
            </td>
            @else
            <td></td>
            @endif

        </tr>
        <?php $i++?>
        @endforeach
    </tbody>
</table>

</div>

</main>
<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.2.1/dist/js/bootstrap.bundle.min.js"
integrity="sha384-u10knCvxywY5kfmNBILK2hRnQC3Pr17a+RTT6rIHI7NnikvbZlHgTPOOmMi466C8" crossorigin="anonymous"></script>
</body>
</html>

</div>
@include("admin.adminscript")

</body>
</html>
</x-app-layout>

</body>
</html>

```

68. Tambahkan script di bawah ini pada file web.php

```

23 Route::get("/deleteuser/{id}", [AdminController::class, "deleteuser"]);

```

69. Tambahkan juga pada file AdminController.blade.php

```

1  <?php
2
3  namespace App\Http\Controllers;
4
5  use Illuminate\Http\Request;
6  use App\Models\User;
7
8  class AdminController extends Controller
9  {
10     public function user()
11     {
12         $data=User::orderBy('id','desc')->paginate(10);
13         return view("admin.users", compact("data"));
14     }
15
16     public function deleteuser($id)
17     {
18         $data=User::find($id);
19         $data->delete();
20         return redirect()->back();
21     }
22 }
23

```

70. Setelah selesai maka kita coba dan tampilannya akan seperti di bawah ini

The screenshot displays the CORONA admin dashboard. On the left is a dark sidebar with a 'Navigation' menu containing 'Pengguna' (highlighted), 'Makanan', 'Chefs', and 'Reservasi'. The main content area has a top right dropdown menu set to 'admin'. Below this is a search bar with the placeholder 'Masukkan kata kunci' and a 'Cari' button. A blue '+ Tambah Data' button is positioned above a table. The table lists three users with columns for 'No', 'Nama', 'Email', and 'Aksi'.

No	Nama	Email	Aksi
1	sonia	soniaalamsyah@gmail.com	<a href="#">Edit</a> <a href="#">Del</a>
2	Fajar Oktavian Nugraha	fjaroktavian58@gmail.com	<a href="#">Edit</a> <a href="#">Del</a>
3	admin	admin@gmail.com
